

CAT# PS-205 200 WATT UNINTERRUPTIBLE POWER SUPPLY

Notes on use and modification

This power supply has a built-in battery charger and inverter that allow it to continue functioning even if AC power is interrupted. The lower portion of the cabinet contains a 12V 3AH lead-acid, gel cell battery which may not work due to age. The battery may be removed and replaced or bypassed. Here are some notes which may be helpful:

1. The unit works fine on 115Vac and 230Vac even though the sticker says 230 Volts only.
2. If you want to remove the battery from the chassis or remove the leads from the battery, be sure to disconnect the power supply from the AC power. The battery leads may be soldered to the terminals. When disconnecting, do not let leads touch the metal chassis. They can cause a short and blow the fuse.

To turn on the supply you must jump the blue and green wires on the 20-pin connector.
